

## How will collaborating with the Every1 project benefit your organization?

---

The digitalization of energy systems means the increased uptake of information and communication technologies in the energy system: smart meters, electrical vehicles, smart apps, and technologies. It is an important element in the transition towards a more sustainable energy system. This impacts everyone: the Every1 project aims to support everyone in their roles in the digitalization of the energy system!

---

What should you expect to gain from the project:

- Receive insights and feedback on learning materials about digitalization of energy – co-create of training material adequate to the needs of your employees
- Interact on exemplary approaches for a feasible flexibility market, best practices, and creating opportunities for pilot projects or demonstrations, to enable and promote market opportunities'

What do we expect from your engagement to the project:

- Participation in networking events
- Feedback on the developing education/training material in relevant topics and suggestions for areas in need of additional educational materials

The collaboration will run approximately from February 2024 until February 2026, aiming to have a least one meeting every 6 months and more often when needed.

Every1 can contribute to the energy transition
